

1  
P.  
a container body consisting of an open frame formed of sheet material having predetermined rigidity, and a blind-end frame, including an annular bottom member, being joined with said open frame so as to be foldable into said open frame, said blind-end frame being formed of sheet material having predetermined flexibility; and

a filter chamber for enclosing a substance to be extracted, being mounted with a filter on said annular bottom member,

wherein said blind-end frame is foldable into said open frame together with said filter chamber.
